DETAILED ACTION

The following is an examiner's statement of reasons for allowance:

The claims in the instant application have not been rejected using prior art because no references, or reasonable combination thereof, could be found which disclose, or suggest, an acetabular reamer for surgical use, comprising: a hemispherical, hollow dome extending from an apex to a lower edge defining a plane at a theoretical equator of the hemispherical dome; and an interface structure comprising a shaft having a proximal end secured to an inner surface of the dome at the apex and extending to a distal end supporting at least two radial spokes extending therefrom in a radial spokes plane within the dome at an intermediate location between the theoretical equatorial plane of the hemispherical dome and the apex, **wherein each radial spoke has a proximal end attached to the shaft and a distal spoke end spaced from an inner surface of the dome along the radial spokes plane**, as set forth in claim 14.

The following is an examiner's statement of reasons for allowance:

The claims in the instant application have not been rejected using prior art because no references, or reasonable combination thereof, could be found which disclose, or suggest, an acetabular reamer for surgical use, comprising: a surgical reamer assembly, which comprises: a hemispherical, hollow dome extending from an apex to a lower edge defining a plane at a theoretical equator of the hemispherical dome; an interface structure comprising a shaft having a proximal end secured to an inner surface of the dome at the apex and extending to a distal end supporting at least

two radial spokes extending therefrom in a radial spokes plane parallel to the equatorial plane so that the interface structure is completely within the dome at an intermediate location between the theoretical equatorial plane of the hemispherical dome and the apex, **wherein each radial spoke has a proximal end attached to the shaft and a distal spoke end spaced from an inner surface of the dome along the radial spokes plane**; and an angled reamer spindle having a coupling, wherein the reamer and the spindle are detachably attachable to each other via the inset interface structure and the coupling, the assembly providing for comparably minimum invasiveness of orthopedic surgery, as set forth in claim 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
